

What is Digitoll

Digitoll is a new digital solution used for the submission of information about goods and transportation. The concept makes it easier for business operators to fulfill the four obligations:

1. Pre-notification
2. Declaration
3. Notification and Disclosure of Information
4. Presentation

Digitoll is planned to become mandatory from April 1, 2025.

Information about transportation, consignments, and declaration must be submitted digitally before border crossing. This will lead to an automated and easier border crossing. If everything is in order and you get a green light at the border at Svinesund and Ørje, you can pass without stopping. You still need to drive through the customs area. At several of our border crossings, you can register your arrival on a tablet and receive a green or red signal. In other places, you must stop at the customs station and show the registration number of your vehicle. There, you will be informed whether you can proceed or if more documentation is needed.

How does it work?

1. **Registration:** Your business must register and adapt its IT systems. Inform your manager about the benefits of using Digitoll.

2. **Information in advance:** Submit all necessary documents digitally before border crossing.

Benefits:

Faster and easier border crossing.

By adopting Digitoll early, you will be able to adapt to the new arrangement well before the deadline.

Questions?

Contact the Customs Authority at digitoll@toll.no for help and more information.
